As an experienced WordPress Developer and E-commerce Website Designer with a solid background in web design and development, I specialize in building interactive and responsive websites that reflect clients' visions and meet their business needs. My expertise includes custom theme design, plugin development, and performance optimization to ensure a smooth, engaging user experience.

With proficiency in both front-end and back-end development, I can transform ideas into professional and functional websites. Based in Dubai, UAE, I am fluent in Arabic, professionally proficient in English, and have a basic knowledge of Russian. Holding a Technical Diploma in Computer Technology, I continuously work on enhancing my skills in WordPress and PHP frameworks to deliver high-quality, user-friendly websites.

One of my standout strengths is my ability to identify and solve problems creatively and effectively, combined with an analytical mindset to find optimal solutions. For example, I recently worked with a client whose website was suffering from slow load times. The project had previously been assigned to multiple developers, none of whom were able to deliver a satisfactory solution within the agreed two-week timeframe.

Upon taking over the project for this website https://glorywp.com/en/

I conducted a comprehensive assessment to identify potential causes of the slowness. Through my analysis, I discovered unnecessary code repetition and unoptimized large images, which were significantly increasing load times. I restructured the code to be more efficient, used tools and online services to reduce image sizes—positively impacting site speed—and implemented advanced caching strategies. Thanks to this analytical approach and innovative solutions, I completed the project in just five days, achieving a 50% improvement in load speed, which increased client satisfaction and user engagement.

I am committed to staying updated with the latest WordPress technologies to provide innovative, sustainable solutions that exceed client expectations. I'd be happy to connect and explore collaboration opportunities to help bring your vision to life.

Willing to relocate: Anywhere
